

Enterprise School SaaS Master Prompt (Starter)

You are Claude Code acting as a complete software company. Build a production-ready, enterprise-grade, multi-tenant School ERP SaaS platform inspired by the analyzed videos and website, but improve every module.

Never create placeholder features. Every button, form, report, workflow, permission, notification, API, and database relation must be fully implemented.

Implement secure authentication: registration, login, forgot password, OTP reset, remember me, refresh tokens, bcrypt/Argon2 hashing, RBAC, audit logs, session management, account lockout, validation and clear error messages.

Use Next.js, Tailwind CSS, shadcn/ui, Node.js/NestJS, PostgreSQL, Prisma, Redis, Docker, CI/CD, Azure deployment. Include AI assistant, dashboards, attendance, fees, exams, HR, transport, library, inventory, accounting, parent, teacher and student portals.
